Remsdaq Announces UK Launch of EntroWatch V3.0 Software

Deeside, UK 08th March 2019 - Remsdaq, a leading manufacturer of access control and perimeter intrusion detection systems, has announced the UK launch of the latest version of its EntroWatch access control software. Version 3.0 will be demonstrated on the Remsdaq stand (SE18) at The Security Event, NEC Birmingham, April 9-11th 2019.

EntroWatch is an access control software package used to manage the Entro series of access door controllers, keypads and card readers manufactured by Remsdaq. The latest version of EntroWatch features integrations to meet the needs of a wide range of installations including commercial buildings, high security sites, government, schools, colleges and hospitals. New features include an enhanced CCTV video integration, allowing pre and post event video analysis, support for biometric readers and perimeter intrusion detection system monitoring.

"The latest version of EntroWatch is ideal for public and commercial applications from 2 to over 3,000 doors" commented Richard Hill, UK Sales Manager Security. "Our development team has worked hard to understand what installers and systems integrators need in terms of integrated security systems. We now have one of the most comprehensive access control software suites for smart buildings and clients looking to provide a safe, secure and optimised energy environment."

The Entro series was the first access control system to utilise the native BACnet/IP protocol; the principle communications language for the HVAC and building automation industries. Using BACnet provides the opportunity to integrate the Entro series into an intelligent building management system, for population and movement data for analytics and rule-based energy usage. The Entro series includes the EntroStar (two-door) and EntroNet (eight-door) access door controllers, EntroPad card readers, keypad and management kit and EntroPass secure credential. For UK government sites Remsdaq supplies a Certified Secure CPNI version of the system.
